

Primal cutting line

Off to a good start

The primal cutting line is for capacities between 100 and 1,500 pigs per hour, and with the possibility of handling considerable deviations in the carcass lengths for cutting.

Automatically de-grambrelled, the carcasses are always positioned in front of the operator, ready for alignment before cutting.

Hygiene

- Components are designed according to the strictest hygiene rules regarding open and cleaning-friendly structures
- CIP system for belt wash after production
- Pneumatic lifting of conveyor belt during cleaning
- Cutting belt made from durable PVC material

Options

The primal cutting line allows for building in a middle turner and has room for cutting rib tops. Further, various other operations are possible, such as cutting off the jowl and/or the tailbone, and round cutting the ham, etc.

Special optional features

- Height-adjustable operator stands - mechanical or hydraulic
- CIP system for cost-efficient wash-down of belts
- VLT belt speed control, individually adjustable
- Possibility of building in various cutting equipment

Why the primal cutting line!

- High capacity
- High yield percentage
- Uniform primal cutting
- Minimum alignment
- Possibilities of adding other operations
- High hygiene level with easy access for cleaning and hygienic design of conveyors, tools, etc.
- Improving work conditions for staff and reducing cleaning time are key factors in every Frontmatec solution
- Improved work conditions and high operator retention with ergonomic designs

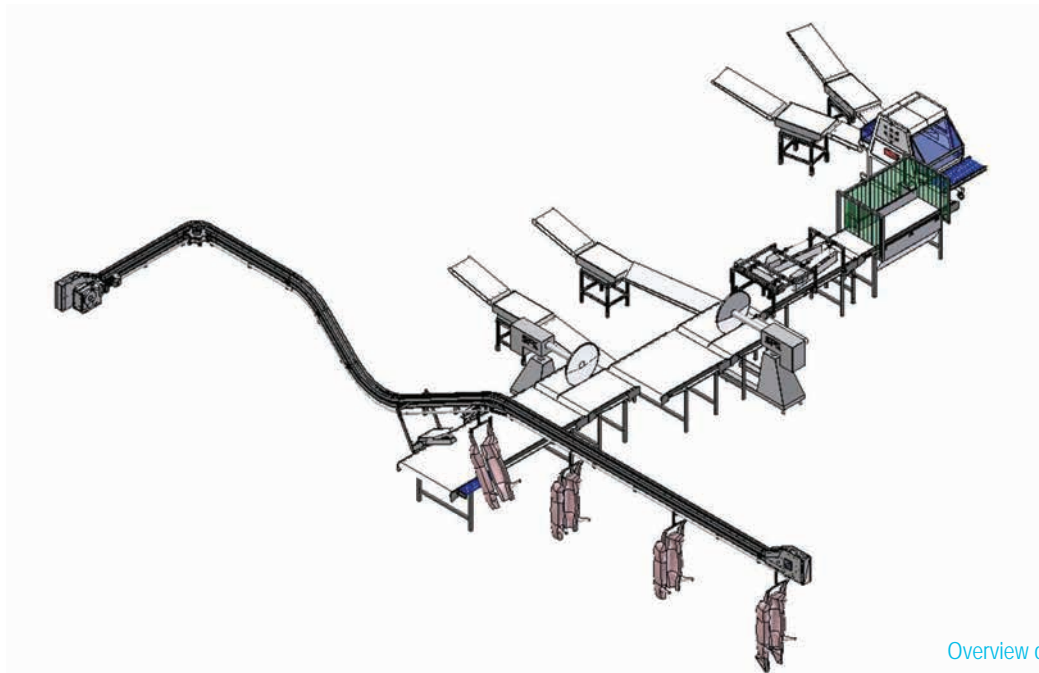

Safety and legal requirements

The primal cutting line is CE approved and designed to meet the strictest demand on health and safety.

Technical data

Capacity	100 to 1,500 pigs/hour
