

Connected services

Be a step ahead with connected services

Be a part of the future

Overall efficiency is the key to a profitable production and one of the reasons why Frontmtec software specialists designed and developed Connected Services. A specialized tool that can predict faults and prevent breakdowns, even before they occur. A service possible from one machine to the whole plant.

Predictive maintenance - service above and beyond

Real-time monitoring together with already collected and analyzed data enables our specialist to provide you with information in regard to:

- Performance
- Condition of critical parts
- How to customize daily service
- Plan maintenance in time to prevent breakdowns
- Why and how to avoid those incidents

This unique service of predictive maintenance also enables us to call you in case of sudden deviations to prevent breakdowns.

Co-operative control

Frontmtec is known for our world-leading expertise in developing software solutions with the purposes to ensure maximized up-time, high food safety, extend the life-time of your equipment and increase your profit and yield. Connected Services co-operates with MES, Scada and our 24/7 support service and together add even more value to your business.

Please do not hesitate to contact us for more information.

Value for you!

- Increases profit and yield
- Extends life-time of equipment
- Maximizes up-time
- Extracts status and condition information
- Uses existing OPC UA
- High level of data security
