FRONTMATEC

FAT-O-MEAT'ER II™ HANDHELD CARCASS GRADING

THE WORLD'S BEST SELLING CARCASS GRADING INSTRUMENT

The Fat-O-Meat'er II[™] is a handheld instrument for control of the lean meat content on pig carcasses by measuring fat and muscle thickness in predefined locations on the carcass.

Probe sensor design

The probe sensor is 125 mm enabling the Fat-O-Meat'er II[™] to be used on large or fat carcasses, yet with a diameter of only 6 mm the area affected is only half of that affected with an 8 mm probe sensor. Furthermore, the probe sensor is insensitive to ambient light and it is also self-adjusting, which makes it easier to maintain.

Mechanical drive and electronic controls

The mechanical drive of the probe sensor is based on a robust Constant Force Torsion Spring Principle making it much easier to operate correctly. The electronic controls are consolidated into a single integrated circuit board. And even the file system is immune to power failure. The keywords are: few parts – less maintenance.

Improved precision

The axial as well as the optical resolution of the Fat-O-Meat'er II[™] is best-in-class. The resolution is just 0.03 mm meaning that measurements are inherently more robust and less prone to operator error. Also, there are no limits to line speed depending on version.

For 3 decades, more than 1000 Fat-O-Meat'ers have been installed throughout the world. We have packed the experience and knowledge from these millions and millions of hours of operation into the Fat-O-Meat'er II™.

Product information

The Fat-O-Meat'er II[™] system is available in 3 versions: High speed, low speed and basic version.

Features	Basic version	Low speed version	High speed version

FAT-O-MEAT'ER II[™] - **TRIED, TESTED AND TOUGH**

The Fat-O-Meat'er II[™] system consists of the measuring probe and our Touch Panel i18 computer. The touch panel is IP69K tested and EN1672-2 compliant. Few parts and high ingress protection ensure best-in-class performance on the line.

A user-friendly and self-explanatory interface software is installed on the touch panel which can be mounted on the line, where it will withstand high pressure and high temperature cleaning from any angle without any special care. Even the stainless steel

connector is waterproof when not mated. Both the touch panel and the probe will withstand alkaline detergents.

Morning test made easy

The morning test and control system integrated into the Fat-O-Meat'er II[™] means that verification of the system is easy and immune to operator error.

FRONTMATEC

Frontmatec develops world-leading customized solutions for automation in the food industry, other hygiene sensitive industries and the utilities industry. We are especially renowned for our high-quality systems for the entire value chain of the meat industry – from carcass grading, slaughter lines, cutting and deboning lines, hygiene systems and control systems, to logistics and packaging.
